

The mission of HTF is to:

*"Improve healthcare delivery outcomes
by promoting the development,
application and support of safe and
effective healthcare technologies."*

The Foundation supports:

- The promotion of excellence in clinical engineering leadership through research, education and certification
- Funding of related research and programs,
- Effective collaborations between medical device producers, regulators, users and clinical engineers,
- The creation of safety-related educational materials that are useful to members of the public

Online and other donations to the Foundation are always welcome.

Online donations can be made on our Contributors webpage:

www.thehtf.org/contributors.asp

Donations "in honor/memory of" will be suitably acknowledged

***A non-profit organization
advancing healthcare
through technology***

The Foundation

The Healthcare Technology Foundation was established in 2002 on the principle that achieving improvement in the safe use of healthcare technology requires diverse stakeholders. HTF board members unite in order to utilize their collective knowledge of the design, use, integration and servicing of healthcare technology, systems and devices to achieve this goal. In addition to industry, regulators, clinicians and clinical engineers, the public must be included as one of the stakeholders such that they are provided with the means to participate in and gain access to guidance on best practices and the safe use of healthcare technology both in clinical settings and at home. The Foundation supports the promotion of excellence in clinical engineering leadership through research, education and certification; funding of related research and programs; effective collaborations between medical device producers, regulators, users, patients, and clinical engineers; and the creation of safety-related education material that is useful to members of the public.

Programs

- *Patient Safety and Education*
- *Patient Safety Brochures*
- *Certification for Clinical Engineers (CCE)*
- *Shepherd Patient Safety Award*
- *Tools for Managing Integrated Technology Risk*
- *Clinical Alarms Management*

Board of Directors

The Foundation's Board of Directors and Officers represent a cross section of experienced leaders including academia, service support organizations, government, medical device manufacturers, insurance, and managers and directors of hospital-based programs. The Board is committed to both guiding the Foundation and by directly contributing their own efforts to its various projects.
